

Environment and Energy Policy

Our business is the recycling of metals from a range of waste streams such as post- consumer goods and industrial sources.

We recognise that our activities such as processing material handling, maintenance, and logistics have the potential to cause pollution and use energy that can impact the environment. We commit to setting high environmental standards and have implemented controls through our management systems which aim to continually improve environmental performance and provide all necessary resources.

To that end we will:

Comply with legal and other requirements associated with environmental performance, particularly those relating to the management of waste and materials, to ensure the environment is protected and pollution prevented.

and seek to:

Achieve the lowest possible greenhouse gas emissions, through energy efficiencies and the use of renewable energy.

Adopt new/emergent low-carbon technologies across our operations.

Achieve the highest possible recycling rates, by using the latest recycling technology.

Achieve the lowest waste generation through recycling and recovery of recycled raw materials from waste streams.

Continually improve our processes of monitoring and measuring environmental performance.

Josh Long

A handwritten signature in black ink that reads "Josh Long". The signature is written in a cursive style and is flanked by small circular marks on both sides.
